

Exploring the Mango Lassi Mystery

A first survey adventure at an Asian food festival in Vienna — uncovering why people love this drink and what the data reveals about its cross-cultural appeal. 🥭

DATA STORY

VIENNA, AUSTRIA

Our Survey Expedition

Ever since moving to Vienna, the popularity of Mango Lassi in Europe has been fascinating. To uncover the mystery, my friend and I went on an expedition at an Asian food festival — conducting a physical survey with **around 200 attendees**, braving more than **100 rejections** — even while offering free Mango Lassi samples! 😊

~200

Survey Participants

Attendees surveyed at the Asian food festival

100+

Rejections

Even while offering free Mango Lassi samples!

60+

Nationalities

Participants from over 60 different countries

Who Took the Survey? Age & Gender Breakdown

The majority of participants fell into the **18–30** and **30–45** age groups, together accounting for over 85% of all respondents. The 18–30 group was the largest, with 112 participants (47 male, 63 female, 2 other), while the 30–45 group contributed 58 participants (35 male, 23 female). Older and younger demographics were notably underrepresented, with only 3 participants aged 60 and above. Female participation slightly edged out male overall, particularly in the younger cohorts.

A City of Diversity: Top 20 Nationalities

Participants came from **60+ nationalities** — a beautiful reflection of Vienna's diversity. Austria dominated with 62 participants, followed by Germany (27) and Thailand (10). And no, I'm not a geography failure for listing **Europe as a country** — some participants preferred to keep it vague. 😊

Awareness: Who's Heard of Mango Lassi?

The majority of participants had heard of Mango Lassi — but awareness grew significantly with age. The **45–60** age group had **100% awareness**, and even the youngest group (below 18) showed 60% familiarity.

Note: This could reflect a bias — surveying at an Asian food festival means attendees are more likely to already know about famous Asian foods and drinks.

Ratings by Gender: Women Love It More

The box plot reveals a clear gender difference in Mango Lassi ratings. **Women** gave a median score of **9/10**, while **men** rated it **8/10**. The "Other" gender category had a median of **8.5**. Across all groups, ratings ranged from a minimum of 5 to a maximum of 10 — **not a single person rated it below 5** out of all 200 participants.

Why TasteAtlas Calls It The Best Dairy Beverage in the World

The overall ratings speak for themselves. Out of **200 participants**, not a single person rated Mango Lassi below 5 — and a staggering **76.5% rated it above 7**. This overwhelming approval helps explain why TasteAtlas crowns Mango Lassi as the world's best dairy beverage.

76.5%

Above 7

Rated the drink above 7 out of 10

23.5%

Between 5 & 7

Gave a moderate but still positive rating

Where Do People Want to Enjoy Mango Lassi?

Participants were asked which cuisine places they'd like to get Mango Lassi, broken down by age. **"Alles"** (German for "all") was the dominant answer — especially among 18–30 year-olds (35 respondents). This could mean they enjoy it everywhere, or that at food festivals people just want to enjoy without overthinking! 🍹

Business Insight: This data point was used to pitch Mango Lassi to restaurant chains in Vienna as a menu addition.

Yogurt Base Preferences & Supermarket Pricing

Yogurt Base Preferences

Out of 187 respondents, **101 preferred dairy only**, **66 were flexible** (both dairy and vegan), and **20 preferred vegan only**. Personal observation: people didn't have strict preferences — most were ready to accept either option.

Preference

Supermarket Price Willingness

The **median price** participants were willing to pay in supermarkets was around **€3** across all genders. One male outlier suggested €1 — matching the price seen at Edeka (Germany). Two female outliers (from Switzerland) suggested €6–7, reflecting Switzerland's higher price expectations.

Note: People likely referenced restaurant prices (~€3.50 for 250–300ml) when answering — supermarket prices are generally lower due to shelf-life constraints.

Conclusion: The Power of Data-Driven Discovery

This survey underscores the **strong, cross-demographic appeal** of Mango Lassi in Vienna. From awareness and ratings to cuisine preferences and pricing, the insights paint a clear picture of consumer sentiment.

Marketing Strategy

Target the 18–45 age group, where awareness and enthusiasm are highest.

Pricing Decisions

€3 median supermarket price; restaurant pricing (~€3.50) sets consumer expectations.

Product Development

Offer both dairy and vegan options — 66 participants were flexible, showing openness to either base.

Restaurant Partnerships

"Alles" preference data supports pitching Mango Lassi to diverse restaurant chains across Vienna.
